

## CHR Solutions Surpasses 500k Sites Passed for FTTx Design

**Houston, TX – November 10, 2016** – CHR Solutions, a leading provider of Network Infrastructure and Engineering Services for Tier 2 and Tier 3 Communications Services Providers recently exceeded the half million mark for sites passed in nation-wide commercial and consumer FTTx design.

This CHR milestone is the result of the North American sprint to meet the ever-growing demand for data. With global IP traffic forecasted to exceed a zettabyte by year-end—the race is on to provide the means to accommodate among other things, the doubling of Internet surveillance, quadrupling of virtual reality traffic and the expected seven-fold growth of Internet gaming traffic over the next four to five years. Internet video is also expected to quadruple by 2020; representing a CAGR of 31%.

The design projects are comprised of a combination of greenfield and brownfield initiatives and are representative of both the need for new infrastructure development as well as improvements to existing infrastructure as required by both the FCC and due in larger part to consumer data demands across the United States.

“We have a delivery model that’s world-class,” said Mike Beecher, Executive Vice President for Engineering Services at CHR. “Our unique approach sets our clients up for success, especially in the construction phase where cost can get out of control. We are steadfast in our commitment to accuracy and efficiency—striving to get it right the first time and clearing the path for our client to speed time to market in an unprecedented race to capture the customer.”

CHR was recently named by Broadband Communities Magazine as a Top 100 FTTH Leader and Innovator.

### **About CHR**
